

Course: Industrial Security for Beginners

Enhance your competencies and invest in your future

The cyber threat and attacks on critical infrastructure and industrial (OT) environments are growing in parallel with the shortage of skills required to understand and respond to them. However, the solution may already exist within your own organisation.

Employees serve as the best defense. Therefore, it is crucial to broaden their understanding of security and equip them with practical skills to effectively safeguard your company.

This course is designed to educate, empower, and develop key employees in the production environment, with the goal of reducing risks within your company.

Participants will gain the ability to comprehend OT security, enhance their security awareness, and fortify your company's defense against cyber threats and attacks.

The course provides

Introduction to what cybersecurity means in industrial OT systems.

Fundamental knowledge of 'OT security hygiene'.

Introduction to cyber-attack characteristics in OT systems.

Access to the ICS Range training platform with opportunity to work on real-life exercises.

Sparring with leading OT security experts.

Participants will receive

Knowledge of attack characteristics and tools to identify and detect cyberattacks on OT equipment.

Insights into typical vulnerabilities in companies and hackers' mindset.

Practical tools for further work on OT security within their own organization.

1 month free access to ICS Range training platform.
